

your TV needs protecting!

Appliances need healthy stable power to operate safely and for long periods of time without giving you trouble. Voltage and mains supply can be unreliable and it can often fluctuate.

Over 80% of appliance failure is caused by bad mains supply!

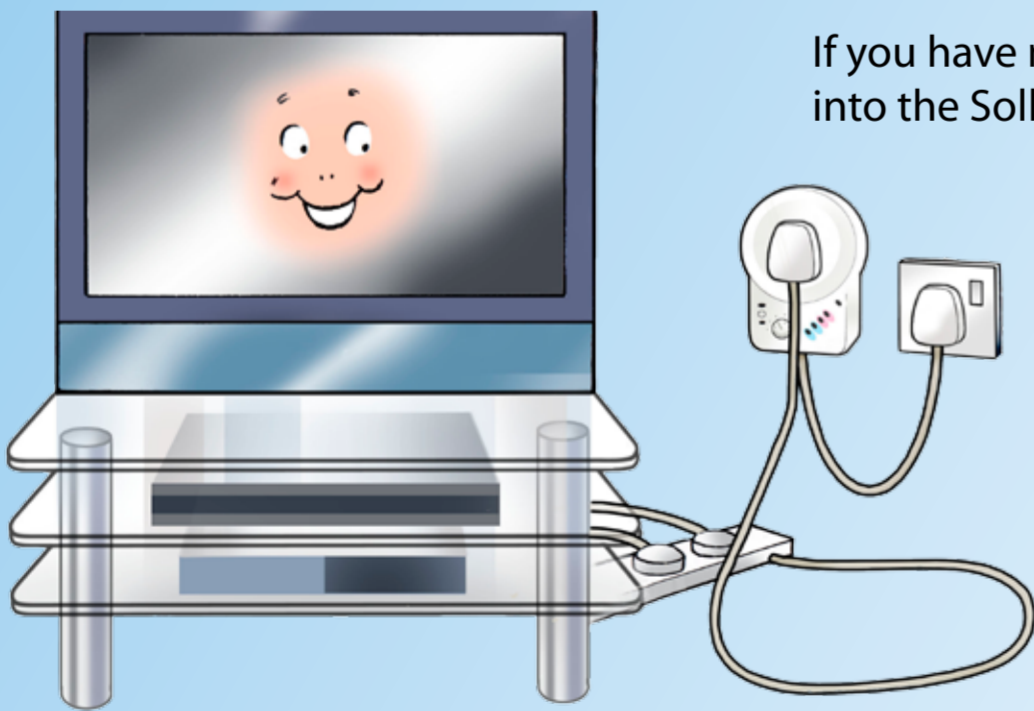

So how do you protect against these problems ?

The worst damage for a TV is **OVER VOLTAGE**- that's when the mains power is too high. Over voltage (or high voltage) can last any amount of time, from seconds up to a days duration. The damage can be instant, severe and is capable of destroying your TV.

The Sollatek TVGuard will guard your TV and video etc against this harmful condition as well as other voltage problems, like spikes and surges.

If you have multiple items to protect (TV, video, DVD, media centre and Freeview box), plug them into the Sollatek AVS. This will protect all of them via the use of a multiway strip.

Protect your TV with a
